STORMTRACKER / FIELD QUICK REFERENCE

Situational awareness at a glance

V10.2.42 immutable operator-accepted baseline | 1 November 2026

RADAR & STORM ANALYSIS

Choose a primary radar; add up to 3 others.
30-min rain playback: six real 5-min scans
when BoM has published all observations.
Automatic check: every five minutes while
active; missed genuine frames are recovered.
Doppler velocity and inferred 3-D are distinct.
The view stays where you put it during updates.

SEVERE WEATHER

BoM thunderstorm and severe-weather polygons
are source-qualified and shown below radar.
Open reports for warning text and intersected
local government / disaster management areas.
Flood gauges indicate genuine severity, rapid
rise and water-over-crossing where applicable.
Cyclone forecasts are not warning bulletins.

RAINFALL OBSERVATIONS

Choose Since 9 am or 24 hrs to 9 am.
Rainfall totals report groups 50+ and 100+ mm.
AEP Notable+ report ranks verified rarity.
AEP depends on rainfall depth and duration
for the gauge location, not a generic threshold.
Do not treat unrated stations as low risk.

COMMUNITY IMPACTS

See Queensland unplanned road closures,
Energex / Ergon outages and QFD incidents.
Use LGA counts and source-specific reports.
Road reports separate local and state roads.
Incident and closure symbols match their
approved sources; confirm at original agency.

OPERATING RULES THAT MUST NEVER CHANGE

- A blank/old radar frame is NOT a verified clear-weather report.
- A verified healthy warning feed with zero results: "No current warnings".
- If a feed cannot be verified, show unavailable; never fabricate weather.
- Map camera moves only on your navigation, radar choice, Reset or explicit Focus.
- A new tab starts at Stapylton; the current tab retains your radar and view.

WHEN INFORMATION LOOKS WRONG

Check the observation time, source status and selected radar; try source refresh.
If the page is stale, return to the tab/foreground and allow automatic recovery.
Use BoM and the original issuing agency for warnings and operational decisions.

Supporting situational awareness only. Not an official warning, forecast, dispatch or decision-making service.
